

Poster Design justification

My poster design was used to promote a racing event at the Spa-Francorchamps Circuit whilst also raising awareness of sustainable development goal 14 which is Life Below Water. This focuses on protecting the ocean and life in the water from pollution.

I used mainly a blue colour palette throughout my poster to refer to the ocean and fit in line with the SDG theme. The background uses a gradient which fades from dark blue at the top to a lighter blue and then sand tones at the bottom which symbolises the environments of the ocean. This gradient in the background helps connect the racing event poster to marine life, helping the message being portrayed stand out. I also used white text throughout the poster to ensure a strong contrast and readability against the blue coloured background. I did this to prevent colours clashing and to also maintain a clean visually appealing appearance.

The typography I used was kept in a bold and capitalised format to ensure it was clearly visible and stands out. Text was also aligned centrally for a good sense of visual hierarchy. The event title I used which was “CONTINENTAL SPEED”, is the most prominent visual text element which can draw attention very well, it highlights the speed element associated with racing along with the cars branded name. Secondary information such as the date, location and slogan are all clearly laid in a way which makes it easy for the viewer to read and see at a distance.

The outline of the Spa-Francorchamps circuit is positioned above the car as a graphical element and I coloured it using the Belgian flag to help gain visual interest, this promotes the events location without overcrowding the poster design. I also placed Belgian flags at both top corners of the poster to add more promotion to the event location and branding.

The environmental message is delivered through the slogan I used which is “Racing for a cleaner ocean” and the text at the bottom of the poster which explains the impacts of pollution on marine life and that the car company races to promote a cleaner ocean. This was done to ensure that the message of promoting life below water stood out and was understood. Sponsor logos I made are positioned at the bottom of the poster to maintain a clear visual hierarchy whilst still showing businesses which aim to aid in preventing ocean harm.

Overall, I feel my poster communicates both the excitement of the race and also the importance of protecting life below water strongly.

Car livery justification

My race car livery was designed to support sustainable development goal 14 which is Life Below Water. The goal was to use the car to raise awareness about pollution in the ocean and how it impacts creatures living in it.

The primary colour used on the car is blue which represents the colour of the ocean and reinforces the environmental theme I was following. A fishnet graphic pattern is applied across the front, roof and back of the car to represent discarded fishing nets which are a major source of ocean pollution as they cause a large threat to marine life. Within this pattern I placed a turtle graphic trapped in the net design, this highlights the real issue of sea turtles and other animals who live in the ocean who become tangled in fishing equipment and plastic waste. This visual is intended to create an emotional response which draws attention to the issues of pollution under the sea.

On the sides of the car, I used a sand graphic texture to represent coastal environments, this links the ocean to beaches which is where pollution often originates, especially plastic waste. I also included water graphics on each side door to continue the visual theme of life below water. Both graphics help show the relationship between the pollution sources and the marine environments they affect.

Sponsors and their placement were made to align with this environmental theme. The BlueSea logo which associates with ocean protection is positioned on the front bonnet and the top of the spoiler area which creates good visibility from the front and back of the car. The ClearTide logos are placed on both side doors, meaning they can be clearly visible during the race as they stand out very well. ClearTide's branding aims to bring awareness to water pollution by showing waste flowing into the ocean out of a pipe which shows the company's focus on pollution prevention and water filtration.

The graphics used throughout the livery were made to remain clear and visible at speed during the race. By combining a strong ocean inspired colour scheme, graphics and sponsor images I feel the livery effectively presents an environmental message whilst still maintaining the appearance a race car is expected to be.
