

Justification

My advert was created in Adobe Premiere Pro to produce a 45 second video promoting the Bentley Continental GT3 race team while highlighting the sustainable development goal of Life Below Water. My aim was to create a fast-paced advert with strong visual impact while ensuring the sustainability message remained clear throughout the video.

The video begins with a two second sports intro created using graphic templates to establish a professional racing theme and create excitement for the viewer (Figure 1). This is followed by a Dip to Black transition into the opening race clip showing the car beginning to drive and crossing the starting line. A Sports Lower Third graphic was added across the bottom of the screen displaying the slogan "Continental Speed, Racing for Our Environment". Using key frames with scale and positioning tools, I made this slide along the screen as the video played (Figure 2). This reinforces the sustainable development goals message whilst keeping a professional appearance.

The lower third graphic continues along the opening clip and returns in clip two where it displays the race location the Spa-Francorchamps Circuit, Stavelot Belgium (Figure 3). This again was done the same way as the previous sliding graphic to animate the movements smoothly across the screen. Between my opening clips I used a Checker Wipe transition and a Pain Splatter transition to maintain pace and create different visuals whilst matching the energy of motorsport advertising (Figure 4).

Clip 2 shows a front facing view of the car taking a corner followed by a VR Gradient Wipe into clip 3 where the car is shown racing amongst competition on a straight. This increases the sense of competition and speed. A Dip to White then brings the video to a rear view shot where my car approaches another vehicle. I adjusted the scale to zoom in so the full livery design and sponsor branding remained visible (Figure 5).

A Cross Dissolve transition moves into a higher angled shot of multiple cars racing around a corner, followed by a Dip to White into the pit stop clip (Figure 6). The clip shows a full upper side view of the car during tyre changes, allowing the audience to see the car from an important promotional angle (Figure 7).

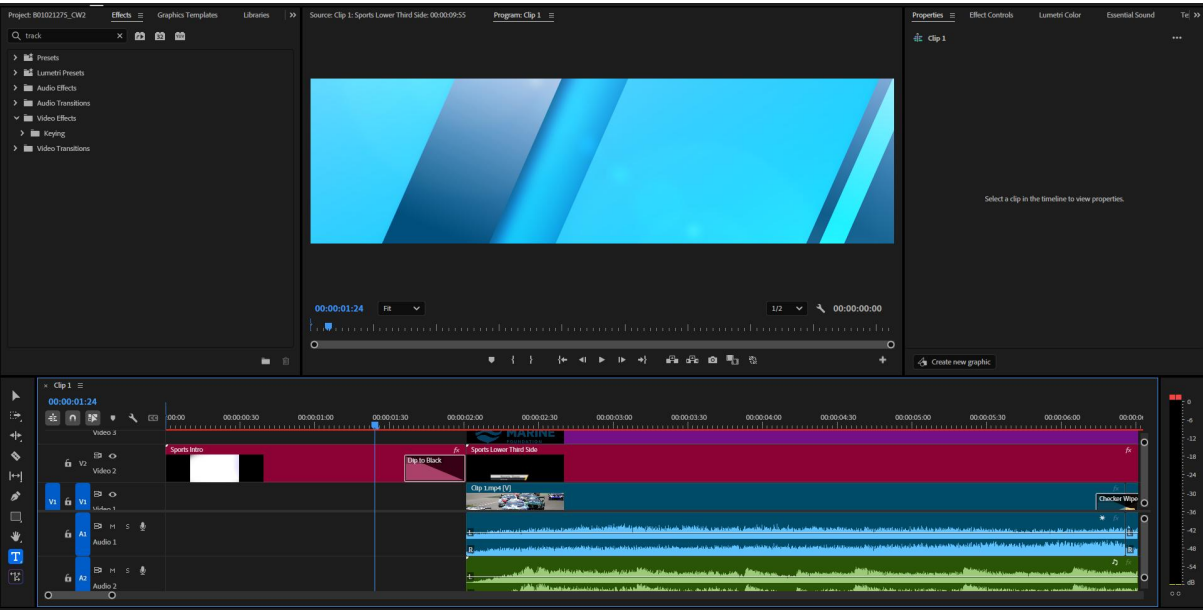

This final clip near the finish line uses large text saying, "Racing for a cleaner ocean". I used transparent text over a black background so that the racing footage could be seen through the letters (Figure 8). Using keyframes and position controls the camera zooms into the background which transitions into the scrolling credits which were created using text alignment and the Roll feature (Figure 9).

Throughout the video the Blue Marine Foundation sponsor logo remains visible in the top right corner to maintain sponsor promotion. The soundtrack used was "Action Trailer Promo Rock" by MagpieMusic from Pixabay. The song begins slower before building as the race starts, increasing excitement and dramatic impact. It becomes calmer during the credits, creating a strong and professional ending to the advert.

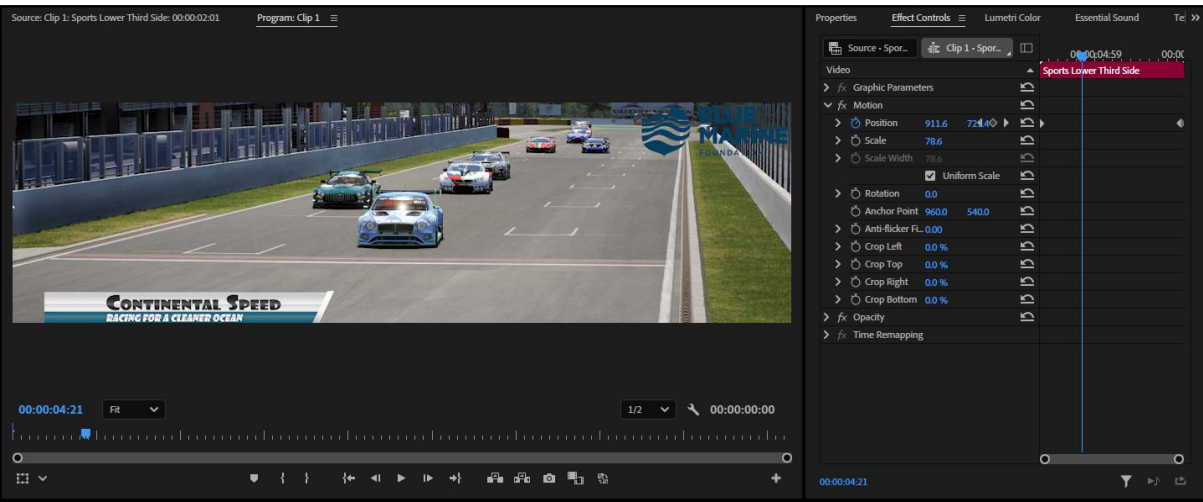

A full timeline screenshot of the completed video can also be found in the image appendix (Figure 10)
